AG Refimeve+ 2020

Muquans in the project

- **REFIMEVE+** : Disseminating an ultra-stable optical frequency standard in the C-band of the ITU-grid over 2 x 4000 km of an operational telecommunication fiber network in France

A tight collaboration between several entities

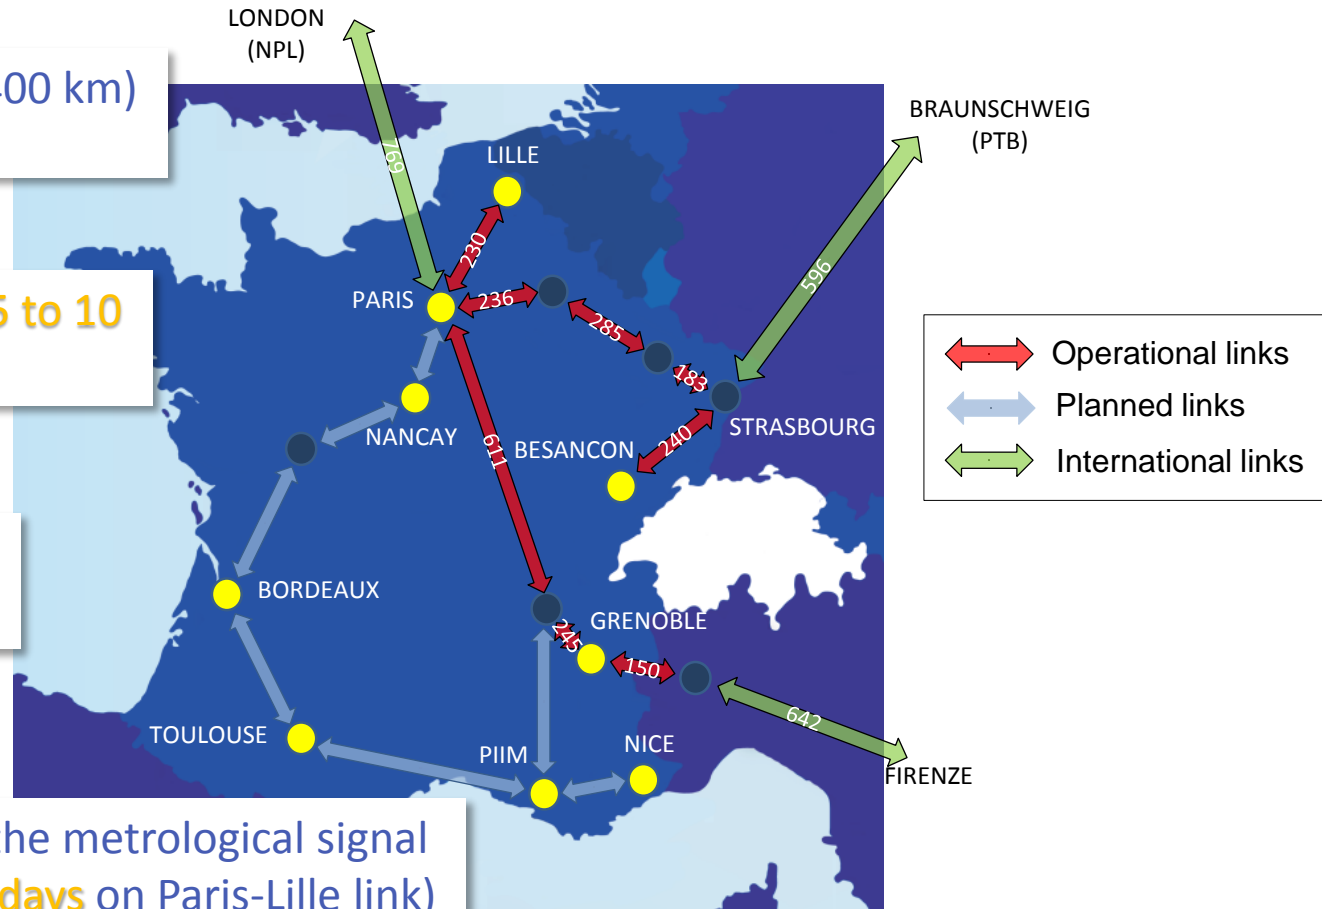

An industrial-grade network

1 4 links deployed (2 x 2400 km)
→ 3 by Muquans

2 Fast deployment : 5 to 10
days for 1 link

3 Efficient optimization :
< 20 days

4 High availability of the metrological signal
(ex : > 99% over 43 days on Paris-Lille link)

➔ Fully autonomous equipments (embedded intelligence)

A big technology challenge

- Equipment:
 - ✓ High-performance level and good reproducibility: **50 state-of-the-art RLS**
 - ✓ Reliability and robustness
 - ✓ Cost and delay control: **6 months of production**
 - ✓ Remote control and autonomy
- Network supervision:
 - ✓ More than 150 equipment to monitor (EDFA, RLS, frequency counters)
 - ✓ Save and analyse large amount of data

The Repeater Laser Station

- Main features :

1 Works in the C-band, channel #44 (1542.14 nm)

2 Uses narrow-linewidth local laser diode (< 5 kHz)

6 Automatic polarization optimization

3 Low-noise heterodyne detection

5 Thermally controlled interferometer : sensitivity < 1 fs/K

4 Needs very low input optical power level (few nW)

Industrial certification process

- A test bench to validate the production:
 - ✓ Electrical and optical qualification process of each RLS (optical losses, thermal sensitivity, ...)
 - ✓ Real link configuration: OADM, bi-dir EDFA, **500 km** of fiber spools, ...

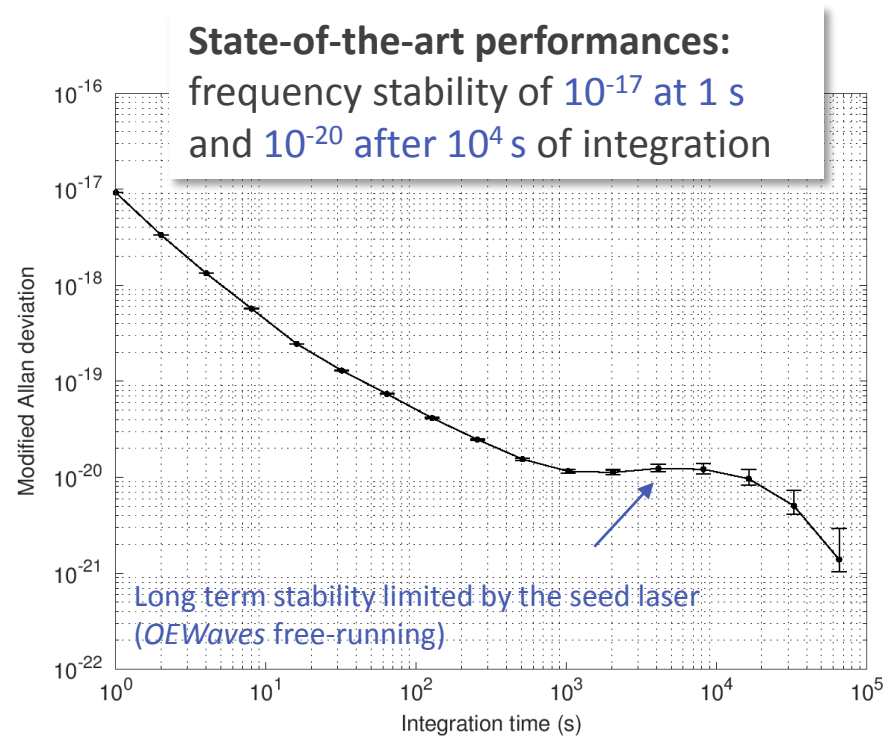

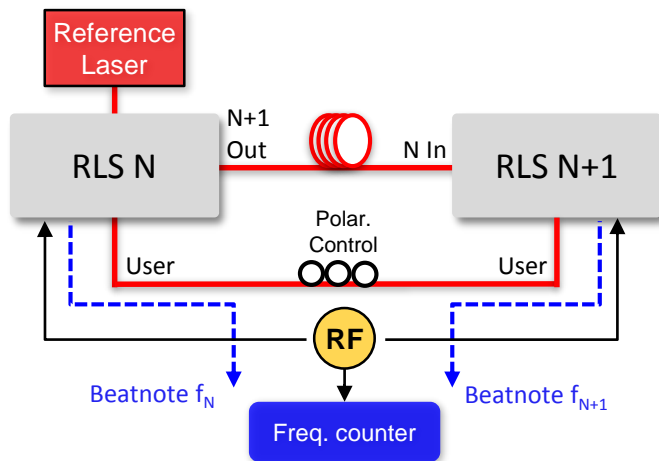

- Configurable for R&D experiments

RLS performances

- Measurement of repeater station noise floor :

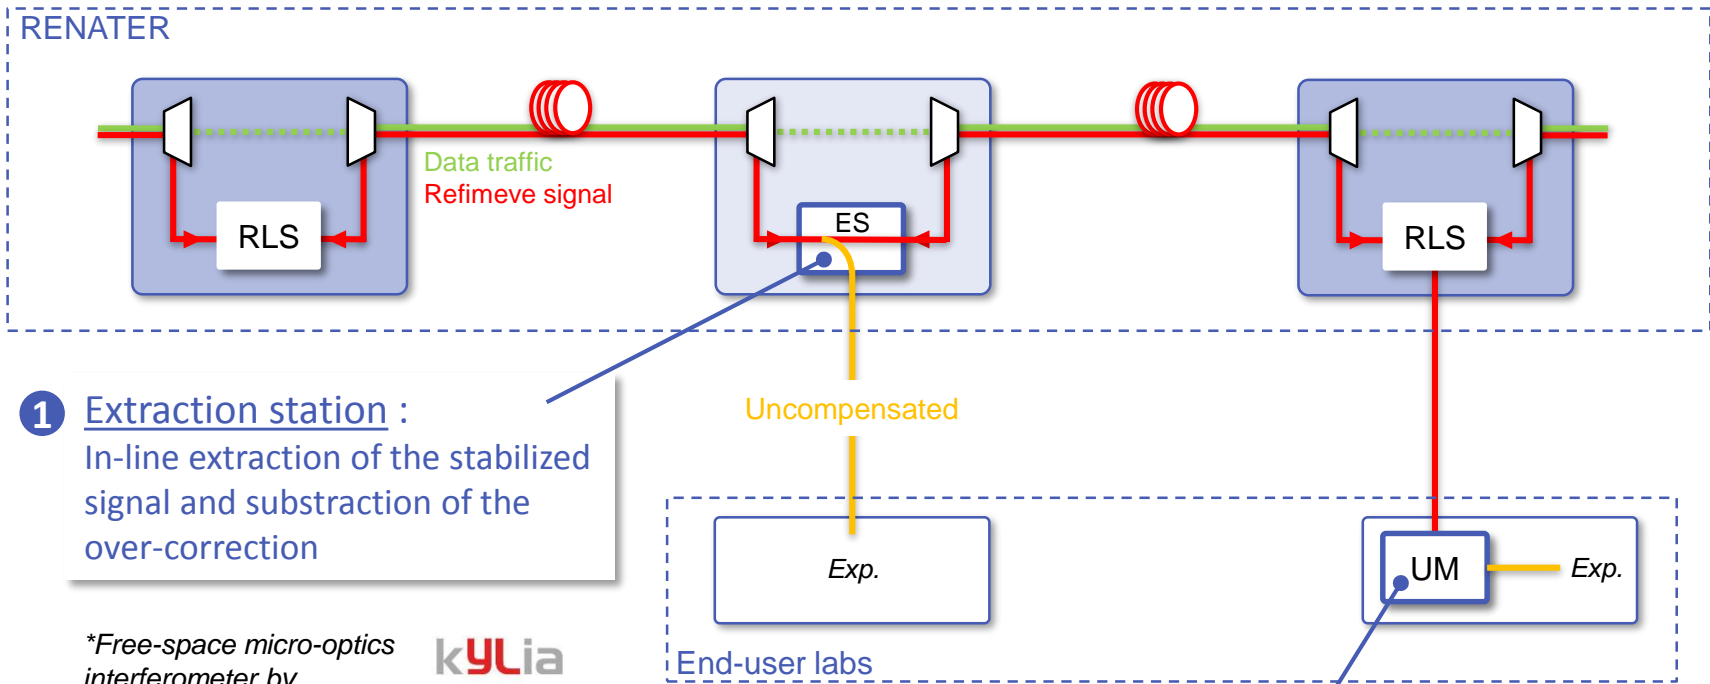

- ✓ Two-way between 2 RLS \rightarrow very short link : 1 m
- ✓ Out-of-loop end-to-end measurement

F. Camargo-Guillou et al, *Characterization of an industrial-grade fiber link for optical reference dissemination*, *Appl Optics* Vol. 57, Issue 25, pp. 7203-7210 (2018)

Other products for fiber links

- Extraction station (ES) and user module (UM)

- 1** Extraction station :
In-line extraction of the stabilized signal and subtraction of the over-correction

- 2** User module (AOM+FM) :
Bring the metrological signal as close to the experiment as possible

- Adaptable solutions to end-user needs

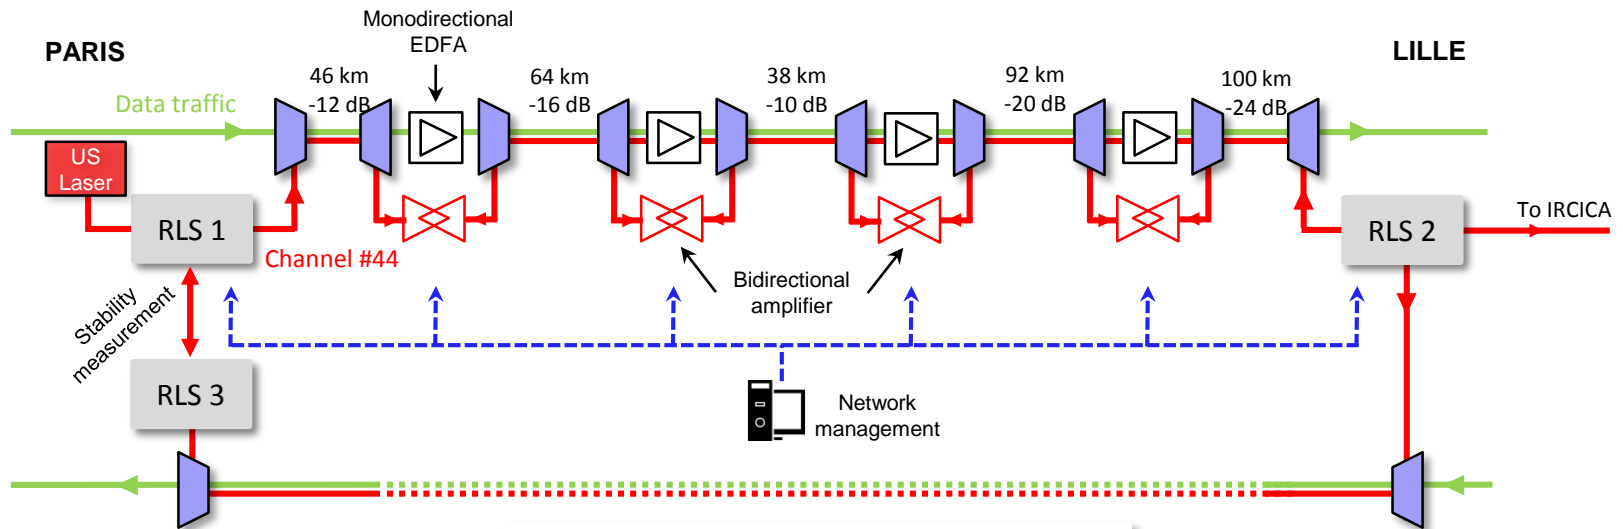

Real link configuration

• Ex : Paris-Lille (2 x 340 km)

1 3 RLS installed in the Renater nodes

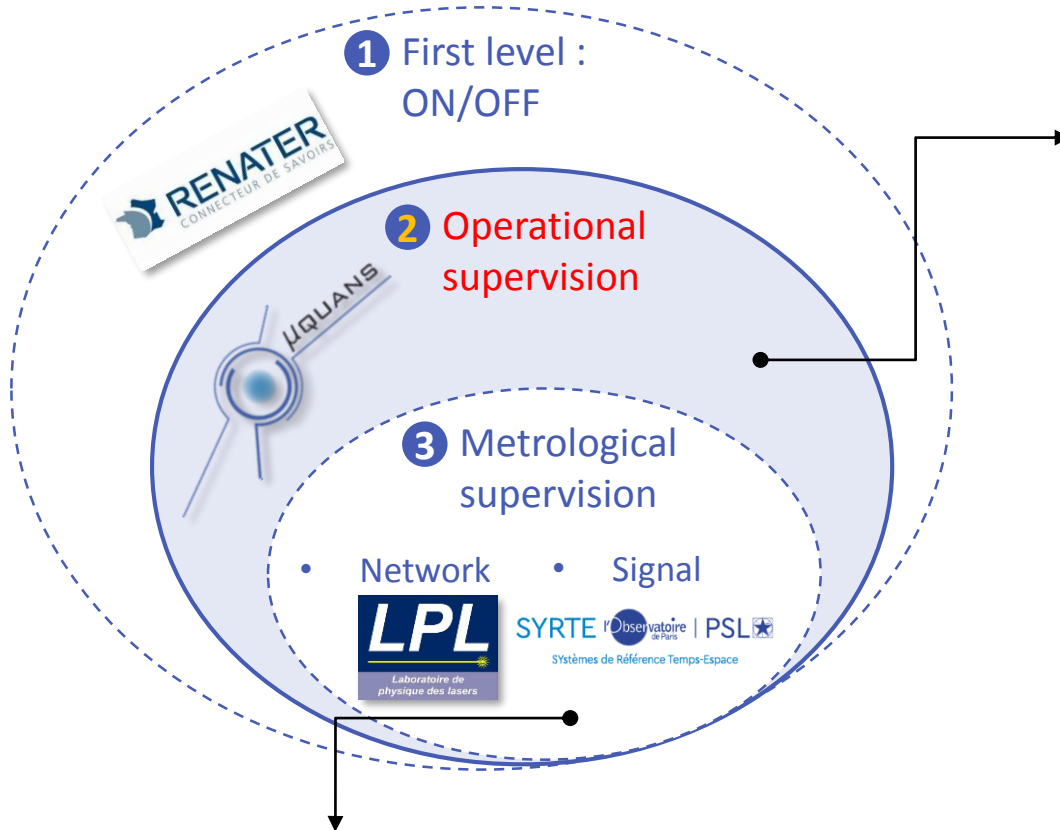

2 4 bi-directional EDFA installed in the telecom shelters with 10 OADM on each span

3 Total optical attenuation : 160 dB

➔ Full remote access to all the equipment (RLS, ES, UM, EDFA) via a Renater VPN

Optical links supervision

Components of the global supervision:

- ✓ **Supervision software:** monitor and control the REFIMEVE+ performances
- ✓ **Database:** store all the information useful to the network management
- ✓ **Human-machine interface:** for final users, academic teams and the network manager

- Metrological data processing
- Accuracy calculation
- Ultra-stable source management

The supervision software

- The role of the supervision software is to:

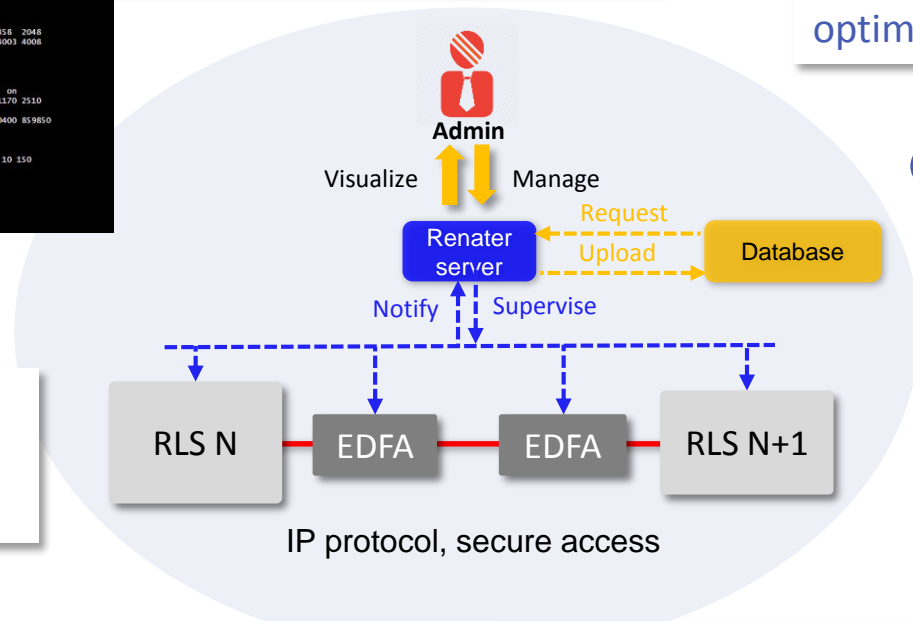

1 Monitor the proper functioning and **remotely control** the equipment parameters in **real-time**.

```

2 Detect and manage **bugs and alarms** (cycle slips, polarization optimizations, ...)

3 Upload the information collected on the field and store in the database (alarm, events, ...)

4 Administrate and troubleshoot system configurations

5 **Data pre-processing: outliers detection, Mdev calculation, ...**

*Software and database hosted on a Renater server

End-user service

- A dedicated interface for the end-users under development with Syrte/LPL
 - ✓ Based on the supervision software
 - ✓ Webpage interface
 - ✓ Sort the useful information for users : link status, frequency data, ...
 - ✓ In progress ...

Web interface

➔ Demonstration !

Conclusion

- First industry-grade frequency transfer link operational
 - ❑ 2 x 2400 km already deployed
 - ❑ State-of-the-art performances (frequency stability < 10^{-18} long term)
 - ❑ High availability (> 99%)
 - ❑ Fast and efficient deployment/optimization of a link
- Deployment of the REFIMEVE+ network under way
- Efficient supervision tool to manage the network
